

Power BI offers interactive and dynamic features required for creating interactive dashboards. These dashboards, which are simply a collection of visuals, can be built with a deep level of interactivity and are accessible in various formats to consumers. Since they are usually a single page, Power BI dashboards need to be well-designed highlights of an entire story.

It is also important to note that Power BI dashboards are quite different from Power BI reports. For example:

1. Power BI reports are available on Power BI Desktop and Power BI service, while Power BI dashboards can only be found on Power BI service.
2. Reports can be multi-paged, while dashboards are single-paged highlights.

This tutorial introduces an end-to-end process of features available in the Power BI service for building interactive dashboards. Although they are a single page and may seem to restrict the depth of insights, dashboards are excellent ways of ensuring that only the most important metrics in the organization are captured.

This seemingly restrictive nature ensures that deep consideration is given to the different visualizations (referred to as tiles) to be captured. These visualizations or tiles can come from multiple reports using different datasets, on-premise or on-cloud, which deliver a highly interactive analytics solution.

Now, let us explore the steps involved in building a Power BI dashboard.

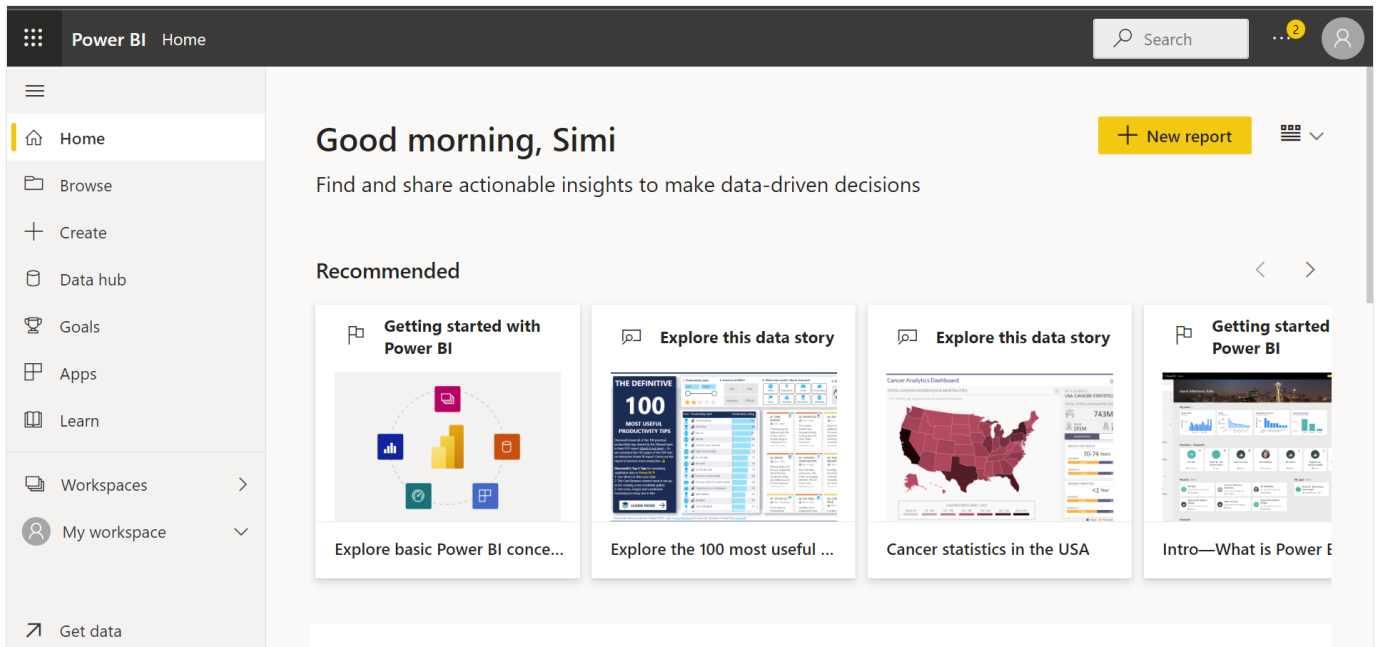

## Building a Power BI Dashboard

### Getting Started with Power BI Service

As mentioned earlier, dashboards are available only on the Power BI service. Therefore, before we begin, we will need a corporate email for access. Visit [app.powerbi.com](https://app.powerbi.com) to register your corporate email, or if you are a student or have an existing work or business email, you can also use that to sign up. After signing in, a home page is displayed.

[Learn more & configure](#)

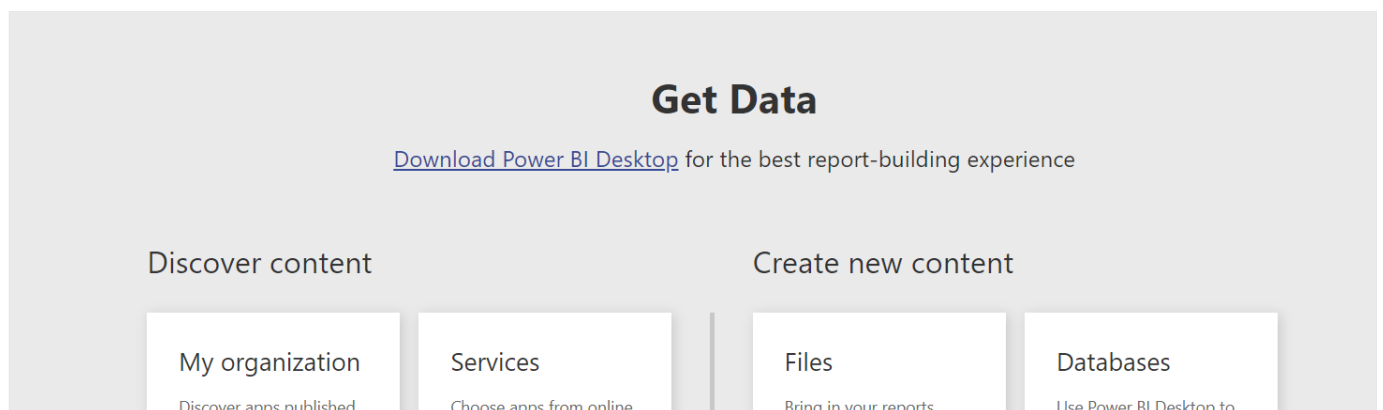

## Importing Data

The first step in building a Power BI dashboard is to import the dataset that will be used to build the report. You can connect to a variety of data sources, including Excel worksheets, databases, the web, and cloud services.

On the homepage of the Power BI service, you can click on the 'Get Data' button found at the bottom right of your window.

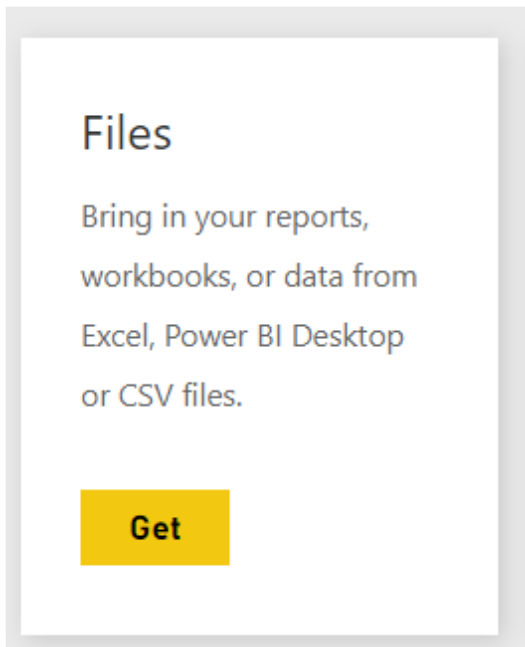

A new 'Get Data' window will come up, and we should be able to preview some of the major data sources available for building our dashboard.

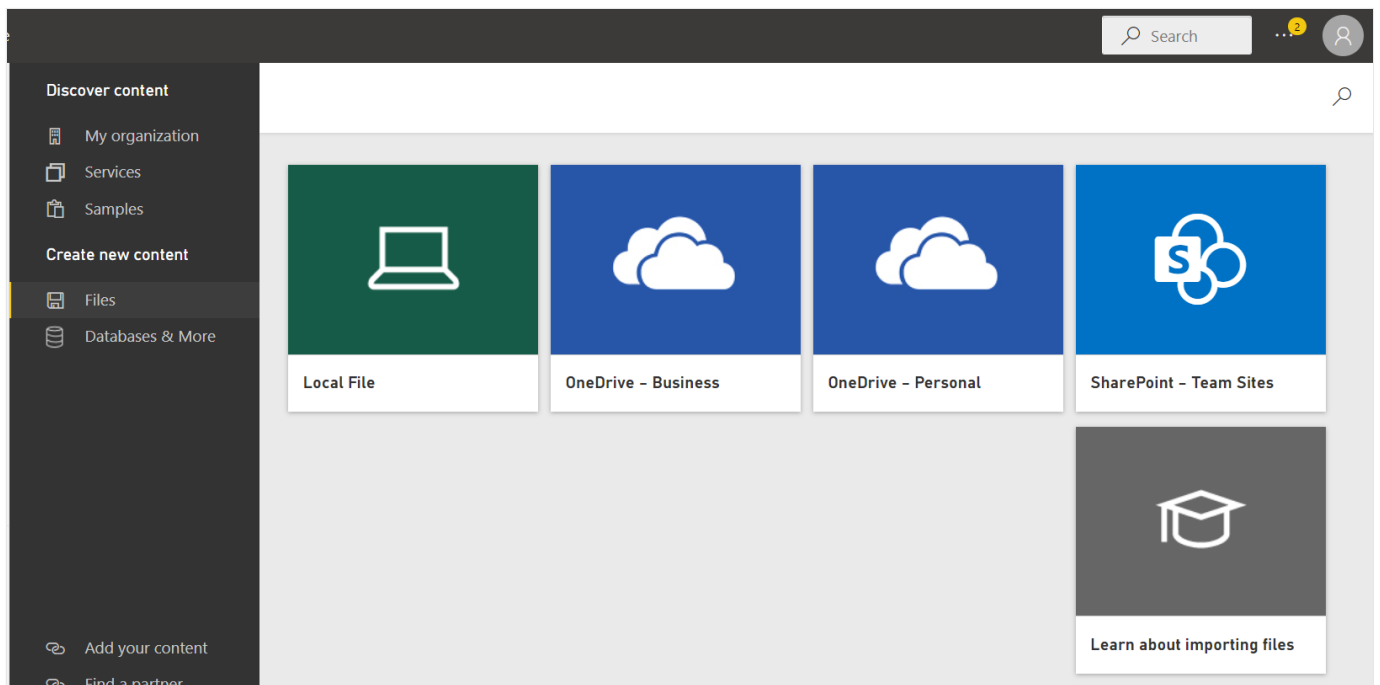

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

- Our file type is an Excel workbook. Next, we will click on the **'Get'** button in the **'Files'** section.

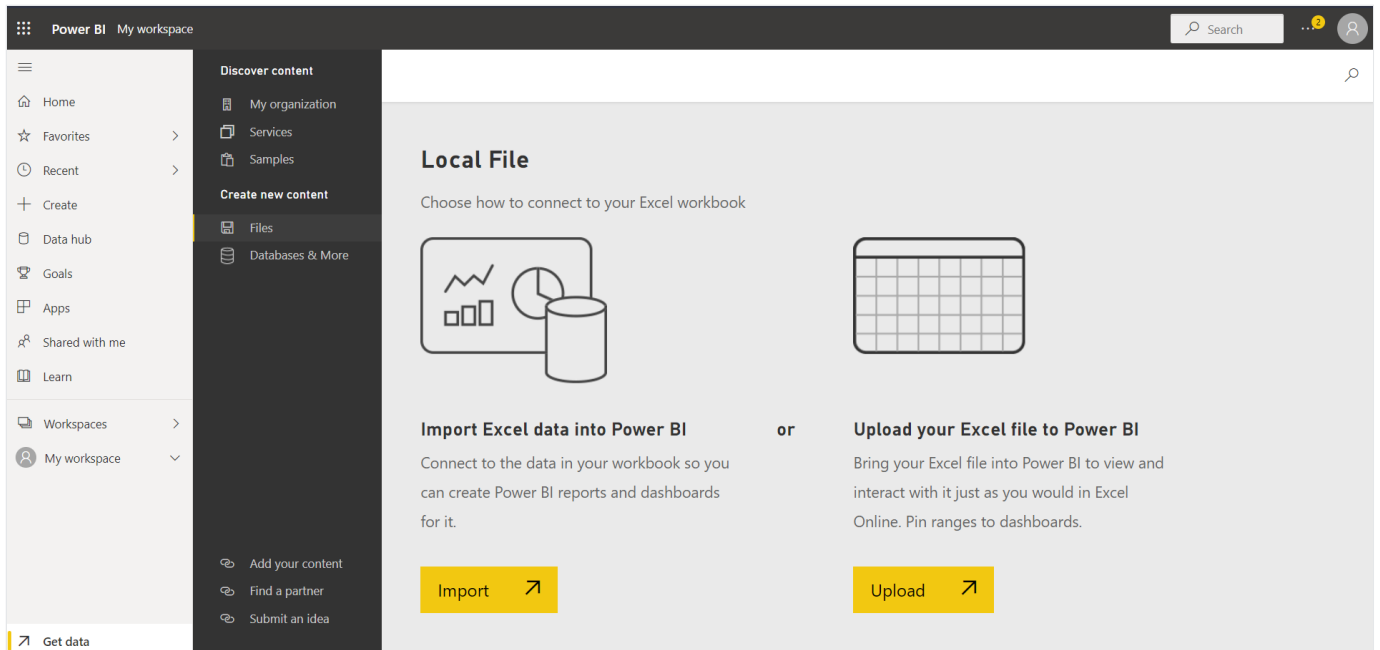

- Choose the 'Local File' option from the list of options on the next page and upload the Excel file.

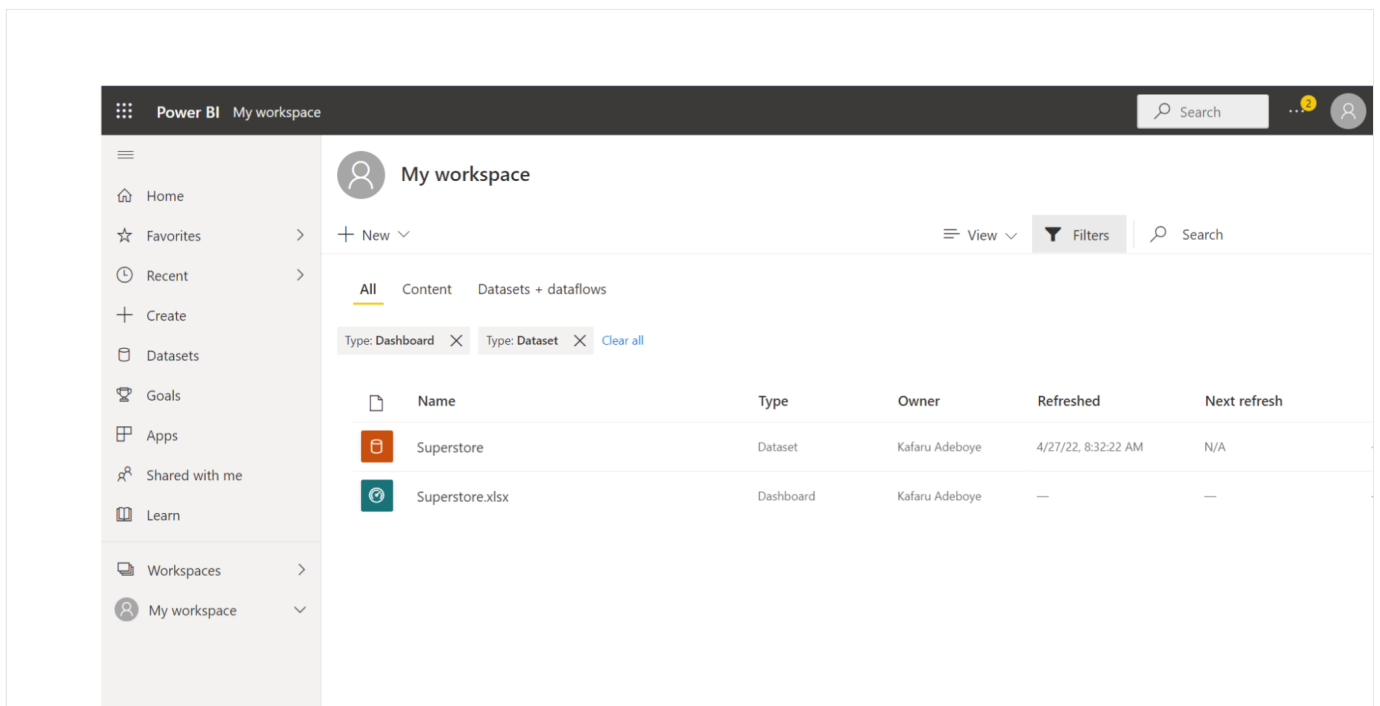

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

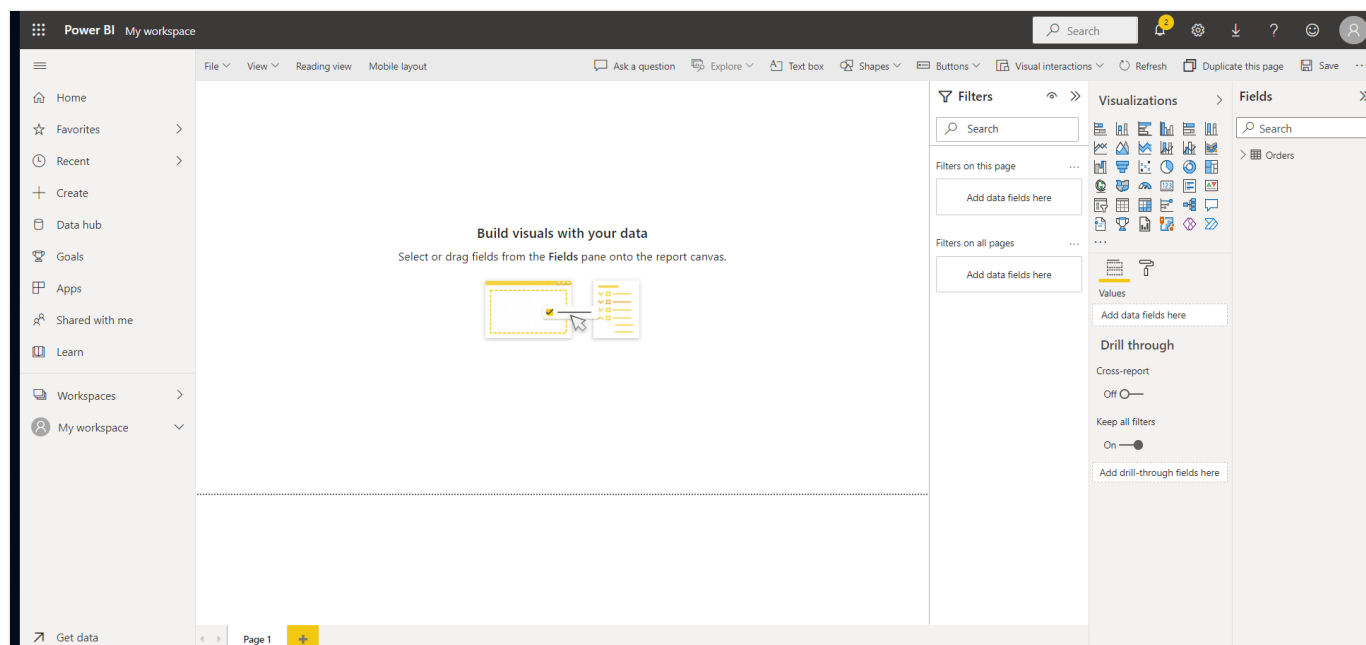

- The Superstore dataset upload (downloadable [here](#)) should be visible on the workspace page. If not, reload your browser page.
- You can also make use of other [datasets](#) provided by DataCamp.

[Learn more & configure](#)

Finally, a Reporting canvas will appear, similar to the view on Power BI Desktop.

## Creating a Tile and ‘Pin to a Dashboard’

Power BI report service, just like the desktop version, includes a variety of page formatting options, including visuals, shapes, and images, that can help your report stand out. One of the most efficient ways to identify and communicate insights is to **use Power BI to create visuals**. You can begin creating your visuals after you have decided on the data that will form the basis of your report, and designed the layout of this report.

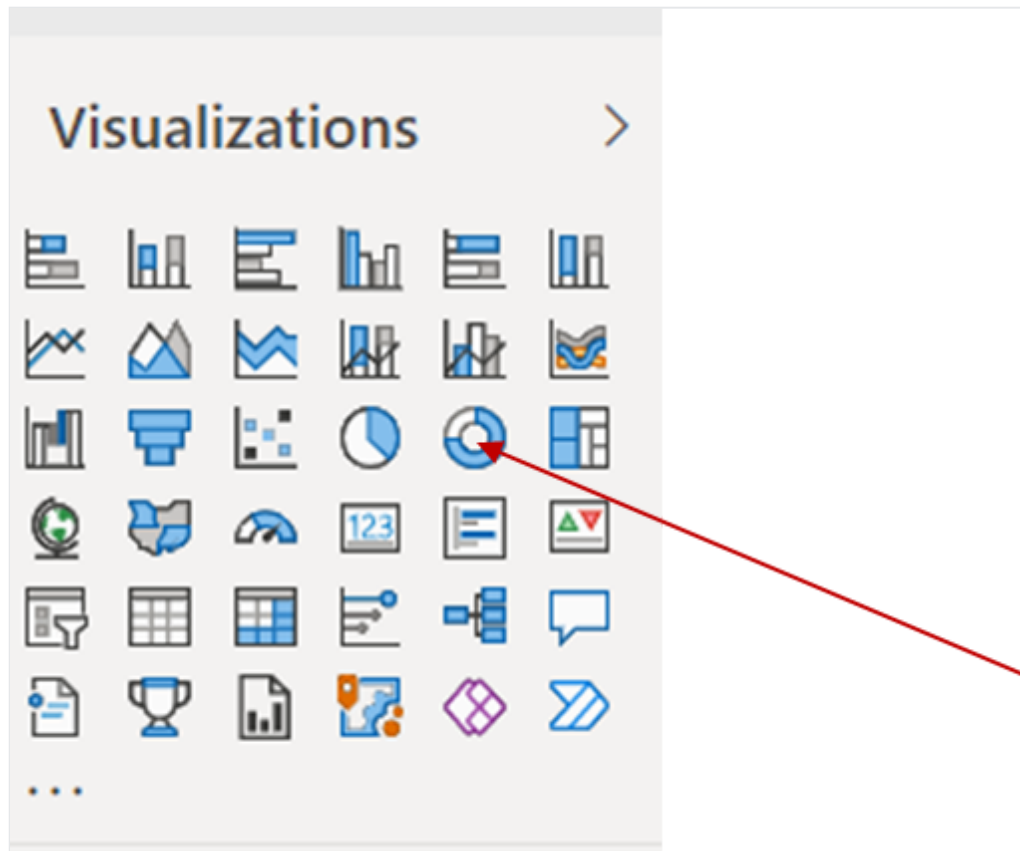

However, before you start working on your data visualization, you must first decide what insights you want to garner, and then develop and personalize visualizations to display the data in an engaging and informative manner.

You can work on how to visualize these insights after you have identified them in order to bring value to your audience. We will create a simple donut chart that shows the ‘Sales across the Shipmode’.

- Select the donut chart option from the visualization pane.

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

- Drop the Sales in the Values field and Ship Mode to the legend.

[Learn more & configure](#)

## Changing Dashboard Themes

Every Power BI dashboard has a default theme that can be changed to suit the dashboard's target audience. To change the theme of a dashboard, edit the option of your dashboard view.

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

## Using Custom Themes

We can either choose from a few available themes or make our own 'custom' theme. In changing the drop-down from the window above to custom, we see some customizable options. This will give us more control over our dashboard's aesthetics. If you want to add a background image, we recommend that your image have a resolution of at least 1920×1080. To use an image as a background, upload the image to a public website, copy the URL, and paste it into the Image URL field.

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

### A few things to note with themes:

1. If you pin a tile to a dashboard, the tile (a single visual) will retain the theme for the dashboard.

# Additional Dashboard Features and Tile Settings

There are a few other features you can make use of with Power BI dashboards:

**Adding Images, Shapes, and Textboxes:** Clicking on the Edit button on the dashboard, choose 'Add a tile'. You can include images in the form of a company logo, text boxes for title blocks, comments, etc.

**Share a Power BI Dashboard:** At the top of our dashboard page, we can share the dashboard with other members of our organization.

**Collaboration with Comments:** When we build dashboards like this, it is important to get feedback and collaborate with either team members or major consumers of this report. The comments option provides a mini forum for conversations around the dashboard elements.

**Expand and Collapse a Dashboard Screen:** We can switch to a full-screen display mode using the expand button on the top right window.

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

therefore contain important information and be **actionable** enough for stakeholders to drive decision making and **understandable**.

## Common mistakes to avoid when building Power BI dashboards

- **Don't choose an inappropriate visual for your dataset:** A visual (or tile) like the one above is not actionable. While it is difficult to visualize so much information, a bar chart would do a much better job.

Bar charts, line charts, scatter plots, area charts, pie charts, and other visuals are available in the Power BI service. When building Power BI tiles for your dashboards, it is critical to match data insight with the most appropriate visual. The following are some of the most common visuals and their applications:

- **Line chart:** The line chart is best used to visualize changes in numeric variables over time.
- **Bar and column charts:** The bar and column charts are best suited for categorical

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

- **Pie Chart:** Pie chart is often used to illustrate the contribution of different values on the whole. It can be used interchangeably with the donut chart. However, it is not advisable to use a pie or donut chart when you have too many categories.
- **Ensure proper and clear labeling:** Make sure all x and y labels of each plot are visible.
- **Be consistent with colors.**
- **Avoid too many slicers:** Dashboards are single-paged, and you must consider the importance of every tile you add to your dashboard. Too many slicers will become redundant and take up valuable space.

You can take a deep dive into designing reports and dashboards with this course on [User-oriented Design in Power BI Course | DataCamp](#).

## General Dashboard Settings

You can make basic changes with regards to:

- A dashboard's name
- The inclusion of a dashboard on a Power BI Home page
- Turning on/off comment blocks.

To access these settings, click on the file option 'Settings'. You will get a dashboard settings window where you can make any of these changes.

## Workspace Access

Power BI workspaces are used to collaborate and share content with colleagues. There is a workspace-level access control that allows you to add colleagues to your workspace.

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

- We can preview all workspaces available by clicking on 'Workspaces' again. This should show a list of all workspaces you are privy to.

## Workspace Roles

For each workspace, there is an 'Access' option. These access levels, more specifically called 'Roles', let workspace owners manage the level of freedom and access a user has in a Power BI workspace environment.

There are four possible roles available:

- Admin
- Contributors
- Members
- Viewers

## Giving Access to Power BI Dashboards

If you want team members to actively collaborate with you in a workspace, you can add them as either admin, members, or contributors. However, view-only users should be added as viewers. [Here](#) is an exhaustive list of functions available for each role.

## Subscriptions

Email Subscription is a feature available to Power BI Pro license users that allows you to subscribe to dashboards or reports in Power BI service which are important for decision making. With this functionality, subscribers to a dashboard will receive regular screenshots of the dashboard page in their email inbox.

The subscription settings allow dashboard builders to decide on the frequency of these emails.

## Requirements to Subscribe

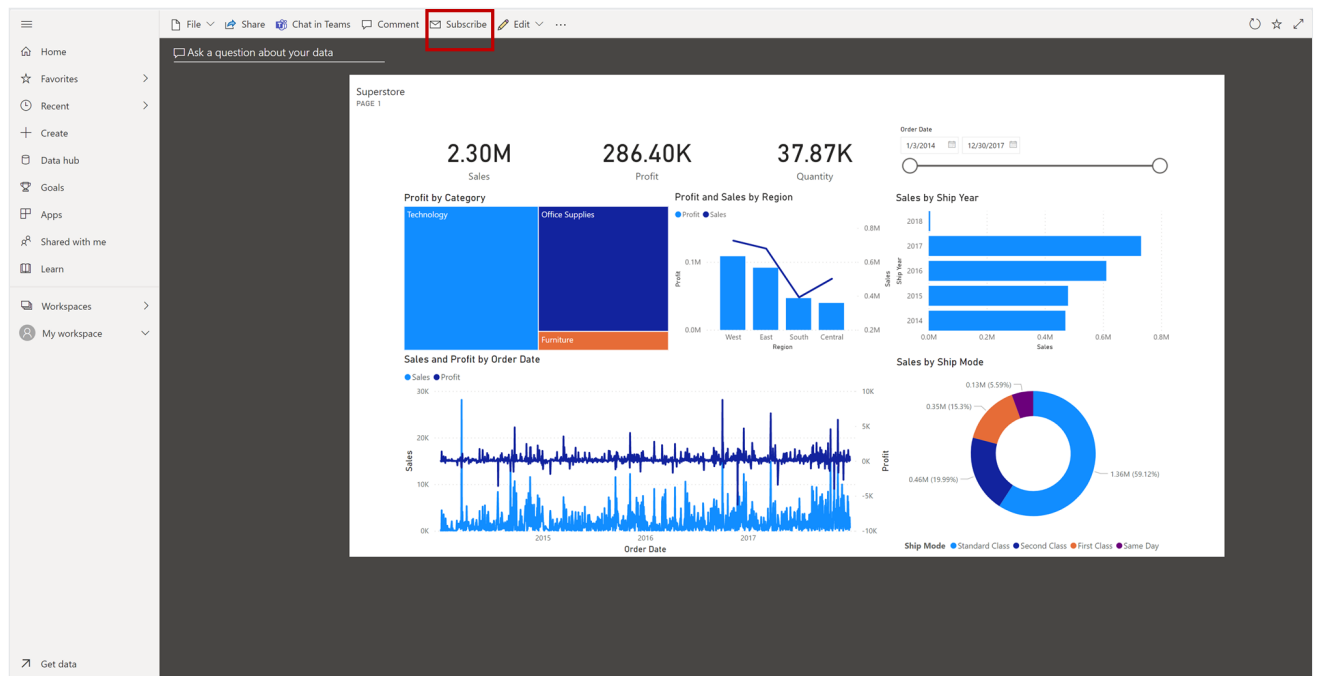

To subscribe to a Power BI dashboard, each subscriber needs to either have a:

- Power BI Pro license or Premium Per User License (PPU) or

DataCamp and our partners use cookies and similar technologies to improve your learning experience, offer data science content relevant to your interests, improve the site and to show more relevant advertisements. You can change your mind at any time.

[Learn more & configure](#)

- At the top of the Power BI dashboard page, click on the 'Subscribe' button.

- Click on the 'Add new subscription' option.
- A more detailed window appears where we can select the email addresses of users to add to this subscription.

The screenshot shows the 'Subscribe to emails' dialog box in Power BI. The dialog box is titled 'Subscribe to emails' and 'SUPERSTORE.XLSX'. It features a yellow 'Add new subscription' button. Below this, there is a section for 'Superstore.xlsx' with a 'Run now' toggle set to 'Off'. The 'Subscribe' section includes a text input for 'Enter email addresses' with a user 'Kafaru Adebeye' listed. There are fields for 'Subject' and 'Include an optional message...'. The 'Frequency' is set to 'Hourly'. The 'Scheduled time' is set to '12:15 PM (UTC) Coordinated Universal Time'. The 'Start date' is '4/28/2022' and the 'End date' is '4/28/2023'. The 'Also include' section has checkboxes for 'Access to this dashboard' and 'Link to dashboard in Power BI', both of which are checked.
